

MedLink

Medical incidents can be daunting no matter where they occur. And while at sea, they can appear even more stressful to crewmembers serving as first responders. Immediate access to MedLink's medical experts can make a captain's treatment or diversion decision easier, allowing them to focus on what's important — navigating the vessel and ensuring the safety of all guests.

24-Hour Medical Support

MedLink advice is provided on the spot by one of MedLink's board-certified ER doctor, who is trained in remote emergency response protocol. Because the MedLink Global Response Center is located in an Emergency Department, medical second opinions and specialist consultations in more than 35 medical specialties are available around the clock. Additionally, MedLink doctors have access to the hospital's regional poison control center.

State-of-the-art Capabilities

Telemedicine. The MedLink Global Response Center houses state-of-the-art telemedicine technology, including real-time videoconferencing and digital diagnostic equipment that can transfer EKG, images, X-rays, CT scans and video within a matter of minutes.

User-friendly communications systems. Vessels may communicate with MedLink's Global Response Center by means of satellite communication.

Translation services. The MedLink response team has the capability of delivering medical advice in more than 140 languages.

Proprietary database. MedLink has access to more than 15,000 hospitals, clinics and dentists worldwide. Dedicated MedLink employees maintain and refresh the medical provider network database systematically, ensuring accurate information in the event that a medical diversion is necessary.

With MedLink, captains are prepared to make informed medical treatment decisions at sea—often resulting in avoided diversions and significant financial savings.

Your Crewmember-to-Doctor Hotline

Comprehensive Services

In addition to providing expert medical assistance at sea, MedLink places great emphasis on services provided before your departure.

Pre-trip: If a guest expresses a medical concern prior to boarding, MedLink's registered nurses can remotely assess the passenger's health and often prevent medical situations from ever happening at-sea.

Access to Global Travel Watch™ provides online destination-specific information for more than 200 countries. Download pre-trip data on immunizations, vaccinations, cultural and political events and more.

At-sea: MedLink physicians will guide onboard crew and/or medical volunteers on how to manage the ill or injured, as well as identify medical resources to use during the event.

Post-trip: When the patient requires additional medical support, MedLink will provide necessary ground-based medical referrals or will coordinate an evacuation for an additional fee.
